QUICK ASSIST™

Wireless Voice Alert Systems

WIRELESS CUSTOMER CALLBOX

BENEFITS:

- Works on your existing 2-way radio system
- Sends "real" voice message to radio-equipped staff
- Increases customer service
- Maximizes employee efficiency

Quick Assist provides customers with a wireless "call for assistance" solution

A recent National Retail Federation survey found "...in the previous six (6) months 62% of [all] respondents indicated...walking out of a store without making a planned purchase." Why? "...because they could not find a sales clerk to help." Quick Assist will solve this costly problem.

When your sales staff needs to be everywhere...at once

If store personnel are difficult to find—customers generally leave without buying. The Quick Assist remedies that problem immediately.

Customers simply push a button to call for assistance, immediately the voice message is transmitted directly and discreetly to radio equipped personnel. To further enhance staff efficiency when an employee arrives to help the customer, a hidden reset button is pushed on the Quick Assist to activate an all clear voice message to other personnel—permitting them to assist other customers, or tend to other duties.

Simple to Program

The Quick Assist is very easy to program and will work with any new or existing VHF/UHF frequency 2-way radio system. Voice messages are recorded using a simple dial pulse telephone. You can also select the number of times and how often the Quick Assist will transmit the voice alert. Even long-range communication is possible through radio repeater systems.

Keeps your Customer Satisfied

The wireless Quick Assist Callbox connects customers to your 2-way radio equipped sales staff—instantly. The Quick Assist enhances customer service, promotes productivity of sales associates, and increases store sales.

Simple to Install

The Quick Assist is weather resistant; battery powered and will operate for 1 year or more on 6 AA batteries. Quick Assist will even alert you automatically when its batteries are low.

No need for any external power. No need for special wiring. No need for expensive remodeling. No need for dedicated phone lines. Plus there's no disruption to operations since the Quick Assist is completely wireless and battery operated. It can be installed anywhere in literally minutes. What's more it can be relocated as needed in a flash. Use it on the sales floor and in outdoor departments.

Ritron also offers optional equipment that permits you to connect your Quick Assist and/or 2-way radios into your existing public address (PA) system.

Ritron...the right wireless solutions

Since 1977 Ritron has been manufacturing a complete line of portables, mobiles, base stations, and repeaters. We can provide the right radio system for your specific operations. Look to Ritron for all your wireless solutions.
